

React Native vs Flutter - 2026 Enterprise Verdict

Hard data from 20+ enterprise mobile shipments across hospitality, logistics and healthcare.

Performance (identical inventory module on identical hardware)

- Cold start: Flutter 1.2s vs React Native 1.4s
- 10K-row list render: Flutter 16ms vs React Native 18ms
- Memory: Flutter 180MB vs React Native 165MB

Developer productivity

React Native wins on hot reload, talent pool (3x more JS than Dart engineers globally), and code-sharing with web React apps (70-80% business logic).

Recommendation

If you also have a web product - pick React Native. If you are shipping a standalone consumer app where pixel-perfect UI dominates - pick Flutter.
